

real world scenarios, making them more competent and confident in their abilities.

For instance, a student studying automotive technology will not only learn about engine mechanics in the classroom but will also gain practical experience by working on actual vehicles.

"The purpose of education is to replace an empty mind with an open one."

As Albert Einstein said:

"The only source of knowledge is experience."

This statement underscores the value of experiential learning, which is cornerstone of technical education. Moreover, technical education often leads to better job prospects and higher earning potential. According to U.S. Bureau of
