## English Assignment

### Essay: "Technical Education"

Education can be divided into two categories, i.e. General Education and Technical Education. General education is normally imparted in schools and colleges. For technical education, there are some special institutes or colleges. These are called technical or technology colleges. In the past there were few technical colleges around. But, when the world came to know the importance of science and technology, thousands of institutes of technical education were established. Even in Pakistan, there are hundreds of technical institutes where thousands of students get technical education and become skilled persons.

"I had to gain experience as I

I didn't have technical education."

The education which provides special practical knowledge and skills is called <sup>technical</sup> practical education. It is different from general education. It makes learners well-skilled in special fields like agriculture, medicine, engineering, Textile, Electronics, Architecture etc. The people who have special technical skills and education are

called technicians. Doctors, engineers, mechanics, architectures etc are all technicians. Technical education concerns with technology.

**" Science is nothing but trained  
and organized common sense."**

Technical education is very important for the development of a country. Technicians are needed in the every field for a country. If a country has sufficient technical hands, it can develop its condition rapidly. In order to produce electricity, to work in mines, to grow enough crops and vegetables, we need different types of technicians. Technical education makes a country rich. If a country has more production of goods, it can feed its people easily. Foreign currency can be earned by selling the extra production to other countries. If we do not have required technicians, we have to hire them from other countries. They have to be paid money as their salary. Through them, the money goes away. By the result, a country cannot be developed. It can be said that the development of a nation depends on technical education.

**" Science is a key which unlocks  
for mankind a store  
of nature."**

Technical education is very important to solve the problem of unemployment. Technical hands cannot be unemployed. They help in every field. On the other hand, technical hands do not need to request others to give them jobs. They can start their own business on their own. Thus technical education makes people independent.

**A man of Science is just a student  
of nature and draws his inspiration  
from it."**

The economic progress of the nation depends on technical hands. Every country should give a high priority on technical education to uplift the prosperity. Technical Education also helps us to solve the problem of unemployment.

**"Education is not preparation of life;  
Education is life itself."**

Technical education plays a pivotal role in shaping the modern world. As the world becomes increasingly reliant on technology, the significance of technical education cannot be overstated. It equips individuals with practical skills and knowledge that are essential for personal and societal progress.  
~~In this way, we will expose the importance~~

One of the primary benefits of technical education lies in its ability to ~~each~~ enhance employability. As industries evolve and become more technologically advanced, the demand for skilled professionals in technical fields continues to rise.

**"Man loves to wander and  
that is the seed of Science."**

In many countries, there exists a significant gap between the skills demanded by industries and the skills possessed by the workforce. Technical education plays a vital role in bridging this gap. By aligning educational programs with the needs of industries, technical education ensures that graduates are equipped with the relevant skills and knowledge required by employers. This not only reduces unemployment but also promotes economic development by providing a skilled workforce that can drive productivity and competitiveness.

**"Education is one thing  
no one can take away from you."**

In short, technical education makes a country rich, prosperous and resourceful but it also has limitations. Too much technical education can turn man into machine. We should never lose our sense of proportion and should have an element of liberal education in technical education.
