PART-1

Q1 ESSAY

TECHNICAL EDUCATION

“Science is a key which unlocks for mankind a store of nature”

In the present day of keen competition and hard struggle, general education is found to be sadly insufficient to procure for man his livelihood. The number of men with general education is legion and all the various departments where these men can be provided are literally packed. The unemployment is growing keener and keener every day and unrest and discontent are dailing ~~daily~~ ~~daily~~ daily, gaining ground.

Technical education means teaching students and others some practical or mechanical art. It includes training in trade, commerce, carpentry, weaving, agriculture, medicines and engineering. It helps to meet the needs of today's world of machines. Those who get such education become technical experts or technicians.

Technical Education plays a very pivotal role in the modern age. It produces engineers, builders, doctors and technicians. It promotes the material and economic development. People begin to have faith in the dignity of labour. We can save a lot of foreign exchange if we have our own technical experts.

"Man loves to wonder and that is the seed of science"

Technical Education is lacking in Pakistan. Our schools and colleges produce men who are fit only to be clerks. Our youth hankers after office jobs. They dislike to work in factories and hate to learn practical skills. That is why unemployment is on the rise in the country. Poverty in Pakistan is due to neglect of technical education. Our country is rich in ~~Pakistan~~ raw material resources, but we cannot enjoy the advantages only because we are not equipped with any technical knowledge.

"Science is nothing but trained and organized common sense"

We can make speedy agricultural process by using machines. To become self-sufficient in food we shall have to set up industries

This is only possible if we have schools, colleges and universities where technical and scientific education is imparted to the students.

Pakistan is a developing country. We have to build new schools, hospitals, bridges, and dams and for this we need engineers and skilled workers. We should be able to use our natural resources like coal, gas, electricity to make Pakistan a developed country.

In all the important cities of Pakistan, technical schools and institutions are being opened every year. We need more and more such institutions.

The idea of dignity of labour should be popularized among the students. They should be encouraged to get technical education for their bright future. In spite of the immense value of technical education, the attitude of educated people towards it is not what should it be.

In short, technical education makes a country rich, prosperous and resourceful, but it has certain limitations also. Too much of technical education changes a man into a machine. We should never lose our sense of appreciation. We should also have an element of liberal education in technical education.

"A man of science is just a student of nature and just derives his inspiration from her"
