Essay:- cc Technical Education "

Technical Education means educating students and others some practical and mechanical arts. It includes agriculture, weaving, engineering and trade trainings. This education helps us to meet the need of today's world of machines. The person who gets such education is called Technical Experts or Technicians.

The government has established an authority, called TEVTA. This authority has set up many technical and vocational institutes which provide intense trainings in so many fields of life. It also provides instruction in such fields like civil, mechanical, electronics and electrical engineering. This authority produces plumbers, carpenters, engineers, TV technicians and other skilled workers.

Science is a key which unlocks for mankind a state of nature.

Unfortunately, technical education is lacking all over in Pakistan. Many students in schools and colleges are all set to become Clerks. This is one of reasons that Pakistan is still under-develop. Our beloved country is rich in raw materials but our men don't have much technical knowledge. Because of lack of this education, there is a rise in poverty and unemployment Pakistan. Our men should earn technical knowledge and education to make Pakistan free from poverty and lack of industrial development.

Science is nothing but trained and organised common sense.

Modern civilization is dominated by science and scientific knowledge. In this world of modern science, industrialization is one of the most important aspects of development in science. In the early ages, science was just meant to make intellectual development of men and in some cases for spiritual cultivation. Education is meant to discipline our emotions and our thinking nowadays. By doing so, it made us proper type of social life. This is why, education especially technical education is very much demanding and significant.

Technical Education makes us skillful to handle machines in the

industries. It trained us to become skillful and specialist to handle problems in different domains of life.

**Man loves to wander and
This is a seed of science.**

In Pakistan, technical education is very much important to make industries the important basis of economy. For this reason, colleges cater to this type of knowledge. In this respect, one thing should be kept in mind that industries to absorb men with this education be made. In fact, we need to set up industries every year so that, at one or other stage, the numbers of technicians will reduce and there will be less employment among them. Some people say that the men with this knowledge can never remain unemployed because they have their own industries, but it is true only in theory. To sell finished goods a good market is required absolutely. But it is not possible to provide both of these things to all men.

A man, named Russell, tells us that technical education makes a man inhuman and purely objective. He looks at every problem with technical point of view, having cold

calculated thinking. For all this, there should be liberal education also, to make our thinking humanitarian and comprehensive. Having only technical education makes us machines but when it is tempered with liberal education, it becomes wholesome and beneficial for all of us. It not only makes us affectionate but also develops our thinking.

A man of science is a student of nature and derives his inspiration from it.

In short, technical education is more or less practical whereas simple education is a bit different from learning skills. Therefore, there should be some technical education in training as a part of it, in Pakistan.

The foundation of every state is the education of the youth.
