• Short Questions:

(i)

• Passwords

Password is a secret word that is used to protect a computer system or program. It may consist of numbers, alphabets or both. The user has to type the password to access the computer system.

(ii)

• Virus Damagings

A computer virus can damage data or software on the computer. It can delete some or all files on the computer system. It can destroy all data by formatting hard drive.

(iii)

• Data Loss

The data can be lost accidentally. Someone can damage the data. Data can be lost completely or partially.

(iii)

• Infected file

It is a file that contains malicious software (malware), such as viruses or ransomware.

It can be spread to ~~another~~ other files, systems or networks.

Activated file

It is a file which refers to a that has been triggered or enabled to perform a specific action or function.

The file allows full access to the software's features.

(v)

• Intentional security

These are deliberate actions taken by individuals to compromise a system.

E.g:

data breaches,
malware attacks.

Unintentional security

These occur without malicious intent, often due to human error or system flaws.

E.g:

accidental data loss,
incorrect handling of
sensitive information.
