"TECHNICAL

EDUCATION"

"Science is a key which unlocks
for mankind a state of
nature" (Samuel Johnson).

→ In the present day of keen competition and hard struggle, general education is found to be sadly insufficient to earn for man his livelihood. The number of men with general education is countless and all the various departments where these men can be provided jobs are literally packed. The unemployment

problem is mounting everyday. so unrest and discontent are daily gaining ground.

• Technical education means teaching students and others some practical and mechanical art. It includes training in trade, commerce, weaving, agriculture, medicines and engineering. It helps to meet the needs of today's world of machines. Those who get such education become technical experts or technicians.

• Technical education plays a very vital role in the modern age. It produces engineers, builders, doctors and technicians. It promotes material and economic development. People begin to have faith in the dignity of labour. We can earn a lot of foreign remittances by supplying technical labour to each other countries, which are always in need in the developing as well as in the developed countries.

"Man loves to wander &
that is the seed of science"
(Emerson).

• Technical education is lacking in Pakistan. Our schools and colleges produce individuals who are fit to be clerks. Our youth hanker after office jobs. They dislike working in factories and hate to learn practical skills. This is why unemployment is on the rise in the country. Poverty in

Pakistan is due to neglect the technical education. Our country is rich in raw material resources, but we cannot enjoy the advantages only because we are not equipped with any technical knowledge.

**"Science is nothing but trained
and organized common sense."**

(Huxley).

• We can make speedy agricultural progress by using ~~mechanics~~ machines. To become self-sufficient in food, we shall have to set up industry that manufactures agricultural machines. We need a great number of highly qualified technical experts and well trained technicians to handle, look after and repair machines. This is possible only if we have schools, colleges and universities, where technical and scientific education is imparted to the student.

• Pakistan is a developing country. We need to build new roads, bridges, hospitals and dams. For this, we need engineers and skilled workers. We should be able to use our natural resources like, coal, gas and electricity to develop Pakistan.

• In all the major cities of Pakistan, technical schools and Institutions are being opened every year. The idea of "dignity of labour" should be promoted among the youth. They should be encouraged to get technical education for a bright future. In spite of the immense value of

technical education, the attitude of educated people towards it is not what it should be.

• In short, technical education makes a country rich, prosperous and resourceful, but it has certain limitations also. Too much of technical education changes a man into machine. We should never lose our sense of proportion. We should also have an element of liberal education in technical education because it is necessary for every one.

"A man of science is just a student of nature and derives his inspirations from her"
(Romans):-
