ESSAY

Technical Education

In the present day of keen competition and hard struggle, general education is "found to be "saddly insufficient to earn for man his livelihood. The number of men with general education is countless and all the various departments where these men can be provided jobs are literally packed. The unemployment problem is mounting everyday - so unrest and discontent are daily gaining ground.

"To succeed in life, you need two things: education and determination."

Technical education means teaching students and others some practical or mechanical art. It includes training in trade, commerce, weaving, agriculture, medicines and engineering. It helps to meet the needs of today's world of machines. Those who get such education become technical experts or technicians.

Technical education plays a very pivotal role in the modern age. It produces engineers, builders, doctors and technicians. It promotes material and economic development. People begin to have faith in the dignity of labour. We can earn a lot of foreign remittances by supplying technical labour to other countries, which are always ~~ministered~~ in the developing as well as in the developed countries.

"Man loves to wander and that is the seed of science."

Technical education is lacking in Pakistan. Our schools and colleges produce individuals who are fit to be clerks. Our youth hankers after office jobs. They dislike working in factories and hate to learn practical skills. This is why unemployment is on the rise in the country. Poverty in Pakistan is due to the neglect of technical education. Our country is rich in raw material resources, but we cannot enjoy the advantages only because we are not equipped with any technical knowledge.

"Science is nothing but trained and organized common sense."

We can make speedy agricultural progress by using machines. To become self-sufficient in food we shall have to set

up industry that manufactures agricultural machines. We need a great number of highly qualified technical experts and well trained technicians to handle, look after and repair machines. This is possible only if we have schools, colleges and Universities where technical and scientific education is imparted to the students.

A country's progress largely depends on its workforce. A technically trained workforce boosts productivity, reduces unemployment, and promotes innovation. For instance, countries like Germany and Japan have achieved economic success due to their focus on technical education.

"An investment in technical education pays the best interest."

Pakistan is a developing country. We need to build new roads, bridges, hospitals and dams. For this, we need engineers and skilled workers; we should be able to use our natural resources like coal, gas and electricity to develop Pakistan.

In all the major cities of Pakistan, technical schools and Institutions are being opened every year. The idea of 'dignity of labour' should be promoted among the youth. They should be encouraged to get technical education.

for a bright future. In spite of the immense value of technical education, the attitude of educated people towards it is not what it should be.

"Technical education prepares the hands to work, the mind to think, and the heart to serve"

Technical education is a cornerstone of progress in the modern world. It provides individuals with the skills needed to succeed in various industries, contributes to economic development, and improves living standards. Although challenges exist, they can be overcome with proper planning and investment.

By promoting technical education, societies can empower individuals to build better futures for themselves and their communities.

As the world continues to evolve, the demand for skilled professionals will only increase, making technical education more important than ever.

"Education is the most powerful weapon which you can use to change the world."
